Compound Action Snips

Of all the reasons Wiss® compound action snips are the industry standard, it really comes down to a single word: durability. Wiss compound action snips have a proven record for long service life that's unmatched. That's why the pros who depend on their snips depend on Wiss.

With serrated blades to grab hold and aggressively cut through material, compound action to multiply the hand's force by five times, and a self-opening spring action for a smooth, low-effort feed, there's nothing "standard" about basic Wiss compound action snips. That's why they're the most popular professional snips in the world. Their wear-resistant molybdenum steel blades are made to stand up to the tremendous pressures created by the compound lever action, while their non-slip textured grips provide superior control, cutting material up to 18 gauge carbon steel.

Specially Hardened Snips

In addition to all the features found on “basic” Wiss compound action snips, the Metalmaster Special Series has jaws specially hardened to cut exotic metals. Easily identified by their blue handles, Special Series snips are built extra strong to withstand the strain of cutting tight curves in heavy stock up to 18 gauge Stainless Steel.

Special Purpose Snips

Wiss Special Purpose snips share many of the features of Wiss aviation snips, including serrated blades and compound action design, however that's only the beginning with these versatile tools.

The MPX All-purpose Cutter has 3-inch chrome-plated blades to resist rust and corrosion, with grips designed for smaller hands. The M300 MultiMaster® snips combine the long cut of traditional tinner's snips with the power of compound action, making them perfect for long, fast cuts in materials like paper, plastic, and sheet metal. MPC3 Metal Wizz® snips are made for around-the-home use, cutting materials like screening, shingles, carpeting, and many more with ease.

Multi-Purpose Tinner Snips

Traditional tinner snips are the only way to go for certain jobs, and Wiss has the widest selection you'll find. Perfect for cutting low carbon cold rolled steel, all Wiss tinner snips are hot drop-forged for strength and durability.

Precision-ground blades ensure consistent cutting performance

Rust-resistant premium steel construction for strength and durability

Double-dipped cushion handles for comfort and better grip

Hot drop-forged steel blades for maximum strength and long blade life

Large handle loops for ease of use while wearing work gloves

 8 1/4" Straight Pattern Snips

A11N
 9 3/4" Straight Pattern Snips

Wiss straight pattern models are perfect for applications requiring straight or relatively wide curved cuts. They have a flat face that helps guide the tool in a straight line. In contrast, Duckbill Combination pattern styles are designed for cutting moderately tight left or right curves. Bulldog Pattern snips offer greater cutting power for notching, nibbling, and chopping heavy stock, while Industrial Offset/Bent Pattern snips are designed to keep hands clear of the material being cut.

HVAC Tools

Wiss HVAC tools feature rust resistant blades and compound action jaws for easy metal bending, cutting, and flattening. All have cushion handles for all-weather comfort and jaws of premium quality steel for sharper edges and long life.

HS1V
Hand Seamer

HS2
Offset Hand Seamer

Hand Seamers feature 1/4" incremental depth marks on jaws. Pipe and duct snips use a patented ball-bearing jaw action that automatically adjusts blade clearance. Choose the HM41V for rigid non-metallic sheet materials or the M41R for sheet metal, vinyl tiles and plastic laminates.

HC5V
Five Blade Hand Crimper

HC3V
Three Blade Hand Crimper

HN1V
Hand Notcher

Join corrugated round or square sheet metal pipes of same size with ease. Crimpers work on up to 22 gauge sheet metal. Notcher produces a clean 30° V-shaped cut in sheet metal without slippage.

Siding Tools

Wiss® offers a basic line of superior quality siding tools. For example, W12L Lightweight Aluminum Snips offer heavy duty performance with the comfort and convenience of a lightweight tool. They will comfortably cut light gauge sheet metal, such as cold rolled steel up to 22 gauge and stainless steel up to 26 gauge, as well as vinyl and aluminum siding, vinyl flooring, roofing materials, and much more.

Lightweight aluminum construction weighs just 16 ounces!

Full 3" blade length for easier cutting and extended blade tip allows access to tight corners

Replaceable, precision ground blades ensure consistent cutting performance

Quick and easy blade replacement

Large ergonomically designed handle loops increase leverage and maneuverability

WSR1
Siding Removal Tool

WTNP1
Trim Nail Punch

The offset blade on the Siding Removal Tool keeps hands and knuckles clear when pulling damaged vinyl siding, while the Trim Nail Punch assures proper nail setting depth without denting the surfaces of soffit, fascia and trim. Also, the Trim Nail Punch accommodates up to 1/4" standard trim and features a long nose for easy access to 1/2" J-Channel. The Snap Lock Punch Tool incorporates spring-loaded jaws for added speed and vinyl grips for increased comfort.
